## SUMMARY

SDET-II with 2.5+ years of experience in test automation, WDIO → Playwright migration, flaky test stabilization using Selenium, Playwright, and Jenkins, driving higher release reliability and improved product quality. Strong ownership in end-to-end quality, and early defect detection through automation and exploratory testing.

## SKILLS

**Programming Languages:** Java, JavaScript, Python

**Automation & Testing Frameworks:** Selenium, TestNG, POC knowledge of JUnit, Playwright

**Testing Methodologies:** Test Automation, Regression Testing, UAT Testing, E2E Testing, Keyword-Driven

**Performance / Load :** SiteSpeed.io, Locust

**PM & Bug Tracking** Agile (Jira), Bugzilla

**Databases & API Tools:** SQL, MySQL, Postman, Request

**CI/CD & Build Tools:** CI/CD, Jenkins, Maven, Git, GitHub

**Cloud Platforms:** AWS

## EXPERIENCE

### Software Development Engineer in Test - 2

Oct 2025 – Present

Cvent - Gurugram, India

- **Led migration of end-to-end automation suites from WDIO to Playwright** using **GitHub Copilot**, ensuring **100% parity in test logic, locators, and coverage** while improving execution speed and maintainability.
- Conducted **UI performance testing using Sitespeed.io**, integrating with **CI/CD** to monitor **Lighthouse metrics, Core Web Vitals, page load time, and frontend rendering performance**, preventing performance regressions.
- **Stabilized flaky automation tests** by identifying root causes such as timing issues, async failures, and improper waits, resulting in a **significant improvement in CI reliability and test pass rates**.
- Created CI dashboards tracking automation health metrics (pass rate, flakiness, execution time) to provide **standard reporting and quality metrics**.
- **Identified and reported minor production defects and edge cases** through exploratory and automation-driven testing, contributing to **higher product quality and reduced post-release issues**.
- **Conducted Root Cause Analysis (RCA)** for production defects and implemented preventive action items to improve system reliability.
- **Technologies:** Playwright, WebdriverIO (WDIO), JavaScript/TypeScript, GitHub Copilot, Sitespeed.io, CI/CD, Jenkins/GitHub Actions, REST APIs, Automation Framework Design, Performance Testing, Agile (Scrum).

### Software Development Engineer in Test

Jun 2023 – Oct 2025

Blox.xyz - Hyderabad, India

- **Engineered a codeless test automation platform** and developed a robust **Selenium-based automation framework**, resulting in a **60% reduction in manual effort** and saving the QA team **20 hours per week**.
- **Automated end-to-end testing** for complex web applications using **Selenium WebDriver, TestNG, and API automation**, significantly improving release velocity and regression coverage.
- **Developed and deployed scalable shell scripts** to orchestrate, schedule, and trigger **API, Selenium, and TestNG-based automated test suites**, ensuring seamless and continuous execution across pipelines.
- **Collaborated cross-functionally** with developers and product teams to **design, validate, and optimize the Post-Sale module** through rigorous **API testing, UI validation**, and accurate **Post-Sale calculation verification**.
- Leveraged **Postman mock servers** for API dependency simulation and implemented **enabling parallel feature development and decoupled frontend-backend QA cycles**.
- **Identified, triaged, and tracked over 400 critical bugs** using **JIRA**, driving **system stability improvements** and enhancing test traceability.

- Conducted comprehensive **manual regression, user acceptance, and exploratory testing**, proactively ensuring software reliability and bug-free releases.
- **Built and optimized Python API automation frameworks** with reusable test scripts, and **conducted performance testing using Locust** to ensure application **scalability and responsiveness under load**, directly reducing defects and accelerating release cycles
- **Technologies:** Selenium, TestNG, Java, Shell Scripting, JIRA, Python, Locust (for performance testing), REST APIs, Postman, MySQL Workbench, JSON.

## Product Intern

April 2023 – June 2023

Skillvalley - Remote, India

- Collaborated closely with the co-founder to develop and refine the product, ensuring alignment with business goals and user needs.
- Analyzed data and gathered user feedback from cohort students to create detailed product documentation and implement improvements.

## Frontend Developer

Jan 2023 – May 2023

Mediastic Web Solutions - Remote, India

- Worked on building an e-commerce website using WooCommerce, ensuring seamless integration and functionality across the platform.
- Collaborated with a team member to develop the website from scratch, starting with the homepage and extending through to the checkout page, utilizing the WooCommerce API.

## PROJECTS

### NaukriResumeAutoUpdater - Automated Resume Updater for Naukri

2025

- Developed a Java-based automation tool to streamline resume updates on the Naukri job portal, enabling users to programmatically update profile details and upload resumes with minimal manual intervention.
- Implemented robust web scraping and automation workflows using Selenium to interact with dynamic web elements and Jsoup to parse HTML, ensuring reliable data extraction and form submissions.
- Optimized update process to reduce manual effort by automating repetitive tasks, saving users significant time in maintaining up-to-date profiles for job applications.
- **Technologies:** Java, Selenium, Jsoup, Web Automation **Live at:** NaukriResumeAutoUpdater

### icodejr - Real-time Code Collaboration 1st position at Skill Valley Cohort

2022

- Developed a web app for real-time code collaboration and discussion, allowing multiple users to join coding sessions and edit code in a live environment. Changes are reflected instantly for all users, facilitating interactive explanations.
- **Technologies:** React, Node.js, Express.js, Socket.io, CSS, JavaScript **Live at:** <https://icodejr.vercel.app/>

### GitHub Search User - GitHub User Statistics

2022

- Built a website that allows users to log in and search GitHub users, displaying key statistics of their GitHub profiles, such as followers, repositories, etc.
- **Technologies:** React, JavaScript, CSS, Auth0, GitHub API **Live at:** <https://githubserach.netlify.app/>

## RESPONSIBILITIES & ACHIEVEMENTS

- **Corporate:** Facilitated impactful sessions on Git and GitHub usage, clean code practices in automation, and other technical topics, collaborating with the Manager and Engineering Head at Blox.
- **Community Building:** Established and led GDG Cloud Nagpur, growing it to a 9k+ member community by organizing events, workshops, and hackathons, while managing a 30-member team and collaborating with local groups and GDSCs for impactful initiatives.
- **Coding Competitions:** Select for Jump-start Program by Publicis Sapient among 28k+ student.
- **Hackathons:** Finalist in Toycathon 2021, Hackathon organized by Ministry of Education's Innovation Cell

## EDUCATION

### Shri Ramdeobaba College of Engineering and Management

Bachelor's of Engineering in Computer Science and Engineering | CGPA: 7.63/10

Nagpur, MH

Aug 2019 – May 2023
